

SafePack™

The unique packaging design

SafePack is a unique packaging system designed to make automatic dishwashing, kitchen cleaning and fabric washing completely safe for the user.

SafePack reduces environmental impact and achieves savings on waste disposal costs when compared to traditional packaging.

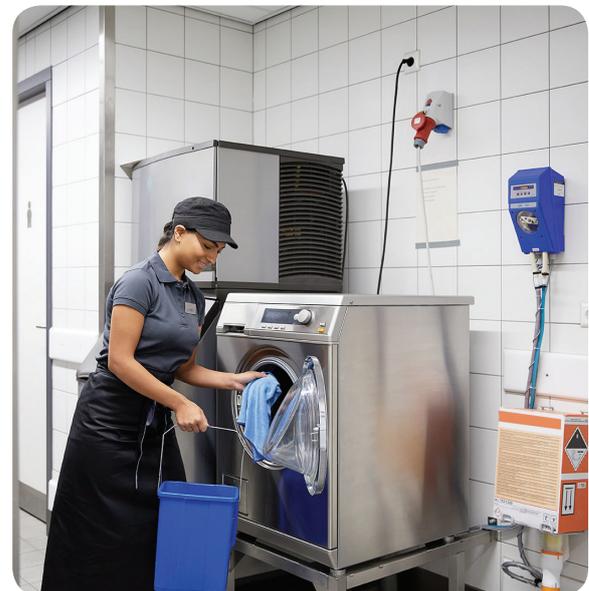

70% reduction in waste volume and up to 45% reduction in weight.

SafePack brings you:

- Complete safety in use
- Optimum efficiency
- Convenience and ease of use
- Environmental care

SafePack eliminates:

- Any contact with the product
- Any chance of a mistake
- Any product waste

Environmental Care

SafePack is a premium liquid packaging system that uses patented technology and award-winning packaging design to maximise safety and minimise waste.

The closed system ensures no product contact is possible and ensures products cannot be confused, allowing even untrained staff to change packs in total safety.

SafePack's unique packaging design is UN tested and approved for safe transit and storage.

SafePack provides optimal storage while occupying minimal space. The gravity fed design means that the entire product is used, leaving no residue, and ensuring maximum cost efficiency.

A 'lock and key' system ensures that only the correct product is used for the task, ensuring the best possible results.

SafePack is designed to fit conveniently on a wall, shelf or cupboard – wherever space is at a premium. With a 10 L maximum weight that is well below EU limits, it is easy to handle, easy to switch and easy to carry. The transparent neck and 'empty alarm' indicate clearly when the pack needs changing.

SafePack significantly reduces packaging waste as both the container and flexitainer can be easily recycled, giving you 70% reduction in plastic waste volume compared to a 20 L can. SafePack empties completely, material separation is easy and mess free.

The system automatically complies with safety and environmental legislation.
