

# Enduro Power™

## Case Study – Fish Processing

**Location:** Norway

**Area:** Holding tanks in hatcheries

**Enduro Power product:** Enduro Chlor

The fish industry can benefit significantly from the Enduro Power range. A fish farm in Norway used Enduro Chlor to clean their holding tanks resulting in significant improvements in operational efficiency:

- Cleaning time for large tanks reduced from 8-10 hours to less than 2 hours.
- Soaking not required.
- High pressure replaced by the Enduro Power range and medium pressure equipment.

**Location:** Spain

**Area:** Pre-cutting

**Enduro Power product:** Enduro Plus

In Spain, a salmon and codfish processing site utilises Enduro Plus in their pre-cutting area before the fillets enter the smoke chambers.

Trials versus their existing chlorinated alkaline foam resulted in exceptional results and an overall cost reduction:

- Chemical usage reduced from 4% to 2%.
- Water and labour usage reduced as shown in the chart below.
- A total cost reduction of 22% has been achieved.
