Hygiene Solutions

Dependable and sustainable hygiene solutions for the Life Sciences Industry
Dependable and sustainable hygiene solutions for the Life Sciences industries.

Protecting Production Integrity - efficiently

From sterile disinfectants to clean-in-place wash down systems, ClearKlens solutions deliver dependable cleaning results while enhancing the efficiency and sustainability of your operation.

Developed to meet the specific needs of the Life Sciences Industry manufacturing facilities, the comprehensive range of ClearKlens hygiene solutions can be relied on to protect your production integrity - efficiently.

The ClearKlens® Range

- ClearKlens – Non Sterile
  - Cleaning In Place
  - Open Plant Cleaning
- ClearKlens – Sterile
- Equipment Solutions
- Personal Care
- Facility management
One stop shop for all your cleaning and hygiene needs

When you partner with Diversey you can fully rely on us for all your cleaning and hygiene needs. Our team will make sure to upgrade your hygiene programs to world class while keeping your spend in control. Whether it is personal hygiene, sanitation programs for high care areas, cleaning program for any equipment or surface, floor cleaning machines or any other hygiene need, we have the solution.

Total solutions approach for Life Sciences industry hygiene

Partnering with our customers to solve hygiene challenges

We have created several pioneering applications for the Pharma Industry, including aqueous cleaning of API’s, a wide membrane CIP product range, optimized CIP programs for vessels, rotational floor disinfection programs with a broad spectrum of chemistry, optimized packaging for sterile disinfectants and cleaners and more. We are always keen to work closely with our customers on unique cleaning and hygiene issues and develop robust solutions to the challenge and ensure safe production.

Sterile detergents and disinfectants for surfaces.

CIP detergents and disinfectants.

Engineering optimization

Finding the most adequate detergent: DSP
The ClearKlens product range streamlines the validation process ensuring:

**BPR Supported Formulation**
The Biocidal Products Regulation (BPR) requires biocidal products to be registered with the European Union and will become the standard for all member states. As a significant investment per formulation you can be rest assured that Diversey ClearKlens is committed to the pharma sector and ensuring that we have a product range that is fit for the purpose.

**Manufactured in a controlled environment to cGMP**
The ClearKlens range is manufactured to cGMP principles (ISO 22716). Our sterile range is manufactured in cleanrooms accredited to the same standards as the cleanrooms the products are designed to be used in.

**Tested to relevant standards**
ClearKlens biocides are tested against relevant standards to prove efficacy against bacteria, fungi and spores. Full test data is available on request.

**Standard, protected worldwide formulations**
The formulations of ClearKlens products are standard across the globe and are protected from change, ensuring no changes will be made unless for reasons beyond Diversey’s control and with extended notice.

**Supported with full technical documentation package**
The ClearKlens range is supplied with a document package containing relevant documentation including: Certificate of Analysis, Certificate of Irradiation, Certificate of Sterility, Copies of the test data, TOC and LD50 data, HPLC test methods for residues, manufacturing specifications and process and packaging specifications where applicable.

**Packaging integrity**
The ClearKlens sterile range is manufactured in sterile conditions to ensure the integrity of the product. Our packaging has been rigorously tested to ensure the integrity of the product is not compromised before or during use.

Open Plant Cleaning (OPC)

It is easy to clean a horizontal surface, however cleaning becomes difficult for vertical surfaces and equipment without CIP using traditional methods of cleaning. As a result these are often left unclean or partially cleaned.

Low Pressure Foam / Gel cleaning techniques offered by Diversey brings to you a number of advantages.

- Effective cleaning of intricate, non-approachable places
- Low pressure avoiding aerosol formation
- Products safe for people and the environment
- Cleaning with minimum human effort leading to consistent results

You will find a Diversey product to satisfy every cleaning need, for all kinds of soil, on every surface within your plant. Our unique combination of products (manual/foam/gel), machines, services, technical support, training and systems makes Open Plant Cleaning quick, efficient and effortless.

API Cleaning

Traditionally APIs have been cleaned using solvents. Cleaning with solvents is expensive, time consuming, hazardous to environment and harmful for workers. Most solvents are also flammable in nature making the open-manual activity even more hazardous.

Diversey brings the technology to clean APIs with aqueous detergents. Our proprietary formulations for API cleaning have been tested with more than 100 APIs achieve improved cleaning with a safe, convenient, quick and eco-friendly technology.

Cleaning Mixing Vessels, Sidepots, etc.

We have developed products and systems for cleaning, deodorizing and disinfection of equipment in cosmetic plants. Our range of machines makes cleaning safe and convenient for equipment without CIP systems.

Tablet Coating Machines

We have developed proven cleaning programs for cleaning of tablet coating polymers including Eudragit brand products and HPMC.

Excipient and Powder Formulations Cleaning

We work closely with our customers to choose/develop custom cleaning program for different formulations and excipients. Contact us with the cleaning challenges faced at your site!
These products are dedicated for the cleaning and/or disinfection of clean rooms surfaces and equipment. All products are at least double bagged and supported by full documentation in order to streamline the validation process.

### Features of the sterile product range:
- Designed for use in iso class 5 facilities
- 0.2 μm filtered
- Double or triple bagged
- Irradiated or sterile filtration
- Sterility tested
- Supplied with physico-chemical certificates of analysis
- Supplied with certificate of irradiation
- Certificates are downloadable at www.clearklens.com

### Validation support:
- Physico-chemical specifications
- Corrosion test
- LD50 - ADE / PDE values
- Dose mapping validation

ClearKlens Trigger Sterile
Our sterile trigger spray “Bag in Bottle” technology maintains sterility for 5.5 months within the use area.

ClearKlens IPA Airless

250 mL Spray
✓ Exclusive airless system
✓ No suck back through spray head

How does it work?
When the sprayer is operated, air is sucked inside the bottle through an external opening and the bag contracts when the liquid is distributed. This allows the pressure of the air inside the bottle to be in equilibrium with that of the environment, preventing any air, which is potentially contaminated, from coming into contact with the product.

Ergonomically designed for ease of use, the bottle is designed to reduce operator fatigue:
• A long handle trigger to reduce stress.
• Designed to be held easily, even with wet gloves.

✓ Hermetic collapsible pouch
✓ Ergonomic design
✓ Total control of sterility - filled under Class A laminar flow into particle free bags

 ✓ 87% reduction in waste disposal costs
 ✓ No waste left in the bottle

 ✓ Works in all positions
 ✓ Consistent spray

 ✓ Constructed from recyclable materials
 ✓ An alternative option to aluminium cans

An under pressure aerosol doesn’t allow of full extraction of the solution.

Spray airless

Spray airless 250 ml
Average residue < 0.5 ml
(test done on 20 pouches)
ClearKlens IPA Sterile Pouch

Sterile 70% IPA in a collapsible 5L pouch, significantly reducing packaging waste while ensuring product integrity.

- Premium 0.2 micron filtered IPA solution, certified by a pharmacist according to the European Pharmacopea.
- Totally flat once emptied leading to significant reductions in waste disposal costs.
- Exclusive airless system, preserving the contents of the bag during use. The bag collapses as the liquid is expelled preventing any air being drawn into the bag and potentially contaminating the contents.
- Enhanced operator safety - Incorporating a 1m remote trigger removing risk of repetitive strain injury caused by traditional spray bottle weight.
- Packaging manufactured from 100% recyclable Poly Ethylene.
- Convenient package that could be perforated to allow the bag to be hung within isolator during use.

ClearKlens Sterile IPA is a surface solution based on 70% Isopropyl alcohol blended with 30% USP grade WFI. Specially designed for hard surfaces, equipment and instruments in class A&B pharmaceutical cleanrooms.

- Ready to use (no dilution required)
- Non-foaming
- Suitable for use in moisture sensitive environments
- Readily evaporates without leaving residues

15 used pouches required the same waste volume as one 5L container

ClearKlens Sterile IPA
Sterile Solutions
Glove disinfection - Touchless dispenser for ClearKlens IPA

A flexible dispenser solution, that combines the highest functionality, reliability and longevity. You need a dispenser that merges proven quality with the hygienic advantages of a touchless system.

Then the IMP Touchless is the dispenser system of choice

- Pump technology proven in continuous use
- Selection of materials according to hygienic viewpoints
- Touchless operation optimizes gloves hygiene
- Simple pump removal from the front
- Battery level indicator
- Designed for use with Sterile ClearKlens® IPA bottles
- Lockable cover available as an accessory

**Body**

- High hygienic standard through anodized aluminium surfaces
- Stress resistant construction optimized for continuous use
- Exchangeable face shield for individual product labelling

**Pump and dosage**

- IMP Touchless stainless steel pump, angled stainless steel suction tube, autoclavable
- Dosage amount: approx. 1.5 ml/push, reducible to approx. 0.5 ml/push

**Filling**

- Designed to be used with ClearKlens IPA (70% IPA, 30% WFI USP quality)
Developed to meet the specific needs of the Life Sciences Industry manufacturing facilities, the comprehensive range of ClearKlens hygiene solutions can be relied on to protect your production integrity - efficiently.

ClearKlens® Oxifast

Committed to value

✓ Excellent sporicidal activity at 5 minutes
✓ Broad spectrum of activity
✓ Non-corrosive to stainless steel
✓ Fully biodegradable

- Fast-acting virucidal and sporicidal disinfectant designed for hard surfaces and equipment externals in critical pharmaceutical areas
- Ready to use solution
- 2 years shelf life – 700 ppm PAA
- Compatibility: suitable for use on the grades of stainless steel, PEHD, PP and all materials commonly found in the pharmaceutical industry.
- Higher efficacy than competitor products
- Dye and perfume free
- Low environmental impact

ClearKlens® Bi-Spore

Improve your disinfection procedure
Use a rapid action, sporicidal solution effective in 5 minutes

✓ Two part system for the creation of Chlorine Dioxide
✓ Designed for disinfecting hard surfaces and equipment
✓ ClearKlens Bi-Spore passes EN test with a shortened contact time of only 5 minutes, an important selection criterion for a Cleanroom disinfectant where wet contact times are limited.
✓ Also available in sterile formats

Passes:
C. albicans in 15 minutes (EN 13697)
Noro, Polio and Parvovirus in 10 minutes (EN 14476)
B. subtilis in 5 minutes (EN 13704)
The ClearKlens product labels are designed to meet the requirements of the Life Science Industry providing the most convenient solution for the user.

1 **Colour coding**

The colour of the label background mirrors the pH value of the product.

Acidic products are labelled with a red colour, green means neutral and blue means alkaline.

Labels of non-sterile products with small pack sizes (<5L) are designed with a grey background colour.

2 **Sterile/Non-sterile icons**

Sterile products are marked with a ‘STERILE’ icon on the upper right corner. Labels of non-sterile products contain a ‘NON STERILE’ icon.

3 **‘Date opened’ and “Discard by’ box**

Dedicated areas provide the option for users to fill in the “Date opened” and “Discard by” date.
Voyager

If you are looking for an all-in-one flexible mobile cleaning solution, look no further. The Voyager range enables foam application disinfection and rinsing of large areas from one unit. The Voyager’s built-in pump boosts the water pressure of your existing water supply, just connect the unit up to a water, power and compressed air* supplies to start benefiting from efficient cleaning. There are a number of optional extras for the Voyager range, including an extra rinsing outlet or a separate foam or disinfectant injector with separate outlet, thus allowing two persons to work simultaneously from the same unit.

*Voyager K models incorporate their own compressor for sites without a compressed air supply.

Modular Wash Down Systems

Our range of modular wash down equipment is designed to deliver optimum distribution, dilution and application of foam detergents, disinfectants and rinsing around your facility. Easy to install and maintain, constructed from high quality material to hygienic designs.

Choose from a single stand alone main station, delivering optimum foam for cleaning and disinfection, or add additional satellites to the main station, or incorporate a central pump station to pressurize your water supply to feed a number of satellites.

Example of Cleaning Protocol

Step 1
Self-foaming detergent*

A
Acidic detergent to remove scale and other minerals based residues

B
Alkaline detergent to remove organic and fat based soils

Step 2
Disinfectant to provide the hygiene level required to all surfaces

* Nitrogen and Phosphate free detergent available
Why use medium pressure?

Efficiency during pre-wash and final rinse.

Cleaning principles:
After pre-rinse with mid pressure, the cleaning is achieved by applying a foaming detergent on all the surfaces to be cleaned including vertical ones and mechanical parts.

The foam created under these conditions is able to cover surfaces between the mechanical parts with detergent which are critical regarding hygiene.

Benefits during rinsing steps:
During the pre-rinse step, usage of mid-pressurized water (between 8 and 40 bars) enables to be under the most efficient conditions versus the other standard domains of water pressure (low pressure under 5 bars / high pressure over 50 bars).

Usage of mid-pressurized water with rotative and fixed nozzles provides the optimal mechanical impact on soils.

It is obvious that a pre-rinse with mid-pressurized water will provide better results than a pre-rinse done with water at low pressure thanks to an improved mechanical impact on the soils.

For the same results, it is quite common to reduce by half the cleaning time which is a major benefit if you consider the total cost of cleaning.

For the same mechanical effect, the usage of mid-pressurized water avoids also some of the secondary effects due to the usage of high pressure:

Soils are not randomly exploded but conveyed towards the drains.

Calorie losses are reduced. The usage of hot water is optimized: the temperature of the water after the nozzle remains high enough to dissolve fat soils.

The mechanical effect obtained with mid-pressure is still effective 30 cm after the nozzle which brings efficacy even on biofilms. The mechanical effect obtained with high pressure drops down significantly 10 cm after the nozzle.

Aerosol creation is reduced with mid-pressure which limits cross-contamination by air.

As humidity and the vibrations of the machines remain limited during pre-rinse step, we generally observe a reduction of the cost of maintenance for production equipments when you pass from high to mid-pressure for rinsing steps.

Benefits during cleaning steps
A complete unit producing mid-pressurized water and foam by automatic dilution of cleaning products enables to:

• Save the time to prepare the foam pots
• Reduce significantly the handling of chemicals by operators
• Keep under control cleaning product concentration which directly influences cost and results of the cleaning method.
Diversey provides unrivalled CIP knowledge. Our strength and competence comes from decades of field experience, application knowledge, understanding of chemistry, system engineering, game changing innovations and a world class portfolio of products. Starting with a full analysis of your specific CIP needs, leading to retrofitting, upgrading or fine-tuning of existing installations or the design and implementation of a fully integrated CIP system, we apply our knowledge and expertise to deliver a solution that will revolutionize speed, hygiene standards and efficiency at your plant.

Our dedicated team of CIP process engineers will simplify your CIP operations, however complex they may be. We work closely with your team in auditing existing CIP installations to obtain a detailed understanding of your needs. Our innovative CIP product formulations coupled with the expertise and process knowledge deliver:

- Lower energy consumption
- Lower water usage
- Process consistency with repeatable results
- Shortened cleaning time

Widest range of CIP detergents for all kinds of soils and surfaces. Proven CIP programs for all products:

- Lower energy consumption
- Lower water usage
- Process consistency with repeatable results
- Shortened cleaning time

All products and programs with complete residue estimation, regulatory and validation support.

The non-sterile range, developed for cleaning and disinfection of Pharmaceutical and Cosmetic manufacturing facilities.

**Clean in place systems (CIP)**

- Cleaning of tanks, vats and vessels
- Speciality products for CIP cleaning and disinfection
- Single step solutions
- Mini CIP: allowing water, time and product optimization
Cleaning In Place (CIP)

The extensive Diversey CIP chemical range offers non-foaming detergents and disinfectants designed for circulation through process equipment. The combined effects of solutions turbulence, chemical energy and heat remove soil debris and microorganism from pile work and ancillary plant without time consuming dismantling and manual cleaning.

### Alkaline Detergents for CIP

To clean pastes, ointments, emulsions, and formulations based on titanium oxide. To clean dry forms including tablets, sachets, powders, eudragit. To clean mixing tanks and fermenters, vaccines.

| ClearKlens Copper Plus | Low foaming, alkaline additive to caustic for use in CIP  
  • Specially effective against high level of product residue (pills, drugs, mineral oils, wax, etc.)  
  • Can be also used on its own | 7519183 | 20 L  |
**Challenge**

Water plays a critical role in your manufacturing process. As one of our most important natural resources, water, and monitoring of its use, has become an integral part of responsible business practices.

Whether the goal is reaching your corporate sustainability metric or with an eye toward cost management, prudent water use has become a business necessity.

Holistic management of your water consumption has the potential to reduce water and wastewater volumes by up to and in some cases over 30%. With water accounting for 30% of the average manufacturers utility costs*, the impact on your financials can be as significant as the impact on your sustainability goals.

**Solution**

Using Diversey AquaCheck, you can optimise water consumption and control costs, create a safer environment for employees, and identify water losses that, when addressed, will lead to utility savings with low capital investment.

*Based on results achieved by Diversey. All facilities are different. The impact for your site will be calculated as part of an initial Diversey AquaCheck scan.

**Benefits**

With Diversey AquaCheck you can:

- Improve your water utilisation
- Measure and trace all sources of water waste
- Reduce your water and effluent treatment, further improving your economic and environmental performance
- Determine whether incremental improvements will improve efficiency
- Prioritize areas of improvement and take action
- Benchmark your business against industry performance using AquaCheck’s analytic tools.

**Best-in-class cleaning in place optimisation:**

Using Diversey CIPCheck, you will benefit from a detailed analysis of your use of energy, chemicals and time spent to identify areas of improvement. Using this information, our teams will develop and implement an action plan to generate immediate productivity gains and energy savings while maintaining – and in many cases, improving your hygiene standards.

75% of CIP cleanings run un-optimized, using original settings.
Broad Spectrum Cleaner & Disinfectant for hard surfaces and non-invasive medical Devices, ideal for preventing and controlling pathogens within veterinary areas

Diversey Oxivir Excel is a highly concentrated one-step cleaner disinfectant with broad spectrum efficacy and short contact times. Based on Diversey patented Accelerated Hydrogen Peroxide formulation Oxivir Excel can be used on hard, nonporous surfaces and some soft furnishings. Available as a concentrate, ready-to-use foam spray or wipes.

Key properties

- Destroys persistent enveloped and non enveloped viruses
- Bactericidal, Virucidal and Yeasticidal
- Disinfects in as little as 30 seconds
- Suitable for use in high-risk areas
- Positive user and surface safety profile
- Convenient, no preparation or laundry required
- Effective cleaner
- Fragrance free
- Active ingredient breaks down into water and oxygen
- No rinsing required
- Concentrated liquid, foam formulation or pre-wetted wipes to save time

Benefits

- Broad efficacy provides the highest levels of patient protection. Extensively tested against European norms and effective against multiple pathogens of concern
- Carries a full virucidal claim
- Suitable for outbreak control in high-risk veterinary areas, including isolation rooms/pens
- Short contact times keep the surface wet thus ensuring disinfectant efficacy
- Excellent cleaning performance, including descaling and lime limitation - removes the need for a pre-cleaning step
- Excellent user safety profile reduces worker risk, with no hazard warnings; does not contain respiratory irritants
- AHP formulation is gentle on surfaces, extending equipment life

Key properties

- Available as an RTU or disposable wipe
✓ Sporicidal, Mycobactericidal, Bactericidal, Virucidal, Yeastcidal and Fungicidal in as little as 1 minute
✓ Kills C diff in 1min in clean conditions, 3 mins in dirty conditions
✓ Powerful surfactant package delivers excellent cleaning performance
✓ Superior safety profile vs some other sporicidal agents
✓ Available as an RTU or disposable wipe
SURE-the Power of nature

Plant-based, 100% biodegradable cleaning products designed to deliver superior professional results.

With environmentally-friendly ingredients from renewable resources, SURE products meet all your daily requirements for facilities and personal care.

Facility Hygiene - TASKI

The easiest way to a perfect facility care
Diversey chemicals are superior on their own and when combined with our machines give you the best possible solution.

Machines & Equipment

TASKI machines clean effectively while reducing water, chemical and energy consumption. Incredibly durable, they’ve undergone some of the industry’s most rigorous testing in the harshest of conditions.

Chemical cleaning products

Diversey provides a complete range of hygiene solutions for your facility hygiene protocol.

Floor

Surface

Glass

Intellibot

Mobile work stations

Mops and Microfiber Cloths
The detergent selection program delivers you an efficient protocol and chemical selection to clean your specific soil, accelerating your cleaning standard operating procedure (SOP) development. ClearKlens® DSP ensures that the best cleaning chemical and procedure are selected for each soil. Benefit from having a team of experts working in close contact with your needs to select the most efficient solution given the utilities available at your site and taking into account the entire ClearKlens® portfolio. As easy as sending a sample. A sample of the soil is sent to the DSP technical team to be assessed. The technical centre will test different cleaning chemistry and procedures and then provide a report that details the best method. This report can then be used to develop your cleaning protocol based on the parameters defined including, chemical type, concentration, cleaning time, temperature, cleaning method and water quality.

Hygiene Academy

The Diversey Hygiene Academy allows you to manage and deploy your own trainings and integrate our reference knowledge into your processes. Better than just following the needs of the industry: Accredited training courses!

Diversey e-Learning Management Systems

- Accessing the latest Cloud training platform simplifying the administration of training for your employees
- Remove costs from your training budget
- Providing a solid training opportunity for your production forces

A Cloud solution that fits your business

Create, print and sign training certificates and add time to completion

Latest cloud technology that improves user experience and minimises set up time

Increase accountability by tracking employee participation and provide documentation to workers and supervisors

No software or expensive hardware required

Save time and reduce the cost of traditional training

Personalize with your own logos and brands

Powerful reporting capabilities to monitor employee participation, performance and progress
Diversey’s purpose is to protect and care for people every day. Diversey has been, and always will be, a pioneer and facilitator for life. We constantly deliver revolutionary cleaning and hygiene technologies that provide total confidence to our customers across all of our global sectors, including: cleaning products, systems and services that efficiently integrate chemicals, machines and sustainability programs. This makes us unique among leading global hygiene and cleaning companies. Everything we do has our customers’ needs at its heart and is based on the belief that cleaning and hygiene are life essentials. With over 95 years of expertise, we safeguard our customers’ businesses, contributing to productivity improvements, lower total operating costs and brand protection.

Diversey is headquartered in Fort Mill, SC, USA. For more information, visit www.diversey.com or follow us on social media.
