DEET 101

What is DEET?

DEET (chemical name N,N-diethyl-meta-toluamide) is used as the active ingredient in many insect repellents. Insect repellents that contain DEET offer the best protection against mosquito bites. DEET is designed for direct application to skin to repel insects, rather than kill them. Products containing DEET currently are available to the public in a variety of liquids, lotions, sprays, and impregnated materials (e.g., wrist bands). Concentrations of DEET in products that are designed for application to skin range from 4% to 100%.

What does the DEET concentration mean?

The concentration of DEET in a product indicates how long the product will be effective. A higher concentration does not mean that the product will work better; It means that it will be effective for a longer period of time. Therefore, products containing lower concentrations of DEET may need to be reapplied, depending on the length of time a person is outdoors.

Can DEET use cause health problems?

Using insect repellents containing DEET should not be harmful if label directions are followed and the product is used safely. In rare cases, using DEET products may cause skin rashes. Some persons who used products containing a high concentration of DEET or who were exposed to excessive amounts of DEET have experienced skin rashes, blisters, and skin and mucous membrane irritation.

Source: [CDC Fact Sheet](#)

When using repellent with DEET, follow these recommendations:

- Read and follow all directions and precautions on the product label.
- Store DEET out of reach of children.
- To apply to face, first spray product onto hands, then rub onto face.
- Use only when outdoors and wash skin with soap and water after coming indoors.
- Higher concentrations of DEET may have a longer repellent effect, however, concentrations over 50% provide no added protection.
- Use just enough repellent to cover exposed skin and/or clothing. Avoid over-application of the product.
- DEET may be used on adults, children, and infants older than 2 months of age. Protect infants from mosquito bites by using a carrier draped with mosquito netting with an elastic edge for a tight fit.

Be safe with DEET:

- Do not allow children under 10 years of age to apply repellent themselves.
- Do not apply to young children's hands or around eyes and mouth.
- Do not breathe in, swallow, or get into the eyes (DEET is toxic if swallowed.)
- Do not put repellent on wounds or broken skin.

Outdoor Area Treatments: (Mosquitos, Ants, Beetles, Earwigs, and more)

Cutter® Backyard™ Bug Control Outdoor Fogger

Nothing spoils outdoor fun like backyard pests. Let Cutter® Backyard™ Bug Control Spray Concentrate do some of the heavy lifting, so you can concentrate on everything else. Protect your outdoor venue from bugs so you and your guests can enjoy the fresh air! Cutter® Backyard™ Bug Control Spray Concentrate features a fast-acting formula that gets rid of ants, fleas, mosquitoes and other insects above and below ground. Provides up to 12 weeks of control for house crickets, carpenter ants, harvester ants, lady beetles and earwigs. Attach the sprayer directly to a hose to spray lawn and garden areas where insects hide.

Insecticides: (Ants, Roaches, Wasps, Hornets, Yellowjackets, and more)

Black Flag® Ant & Roach Killer

Ants enter seeking food, moisture, and a refuge from extreme outdoor environmental conditions such as dry, hot conditions or flooding (such as from a hard rain). To help keep ants from entering indoors, install gaskets around electrical wall plates, seal window frames, and use waterproof silicone caulking to seal cracks in foundations and other entry points. Keep kitchens and other food storage areas clean. Food sources such as sugar and honey should be stored in sealed containers. Clean up grease spills and remove garbage daily. Indoor potted plants should be inspected, as they could be an indoor nesting site. Black Flag® Ant & Roach Killer kills on contact and keeps on killing for up to 16 weeks. For spot treatment of Cockroaches, Ants**, Carpenter Ants, Spiders (including Black Widow and Wolf Spiders), Crickets, Firebrats and Silverfish, fleas, brown ticks, and carpet beetles. **Excluding Pharaoh Ants and Fire Ants.

Black Flag® Flying Insect Killer

Flying insects can be a nuisance indoors or out. Good sanitation is critical to reducing the incidence of house fly problems. Keeping food in sealed containers, maintaining properly sealed garbage containers, and making sure that window and door screens are in good order will all help to reduce flying insects indoors. Outdoors, proper maintenance of compost piles and eliminating lawn clippings can help reduce infestations. Black Flag® Flying Insect Killer aerosol gets rid of houseflies, fruit flies, mosquitoes, wasps, hornets, yellowjackets, gnats, skipper flies, and small flying moths. Kills on contact and keeps killing bugs landing on treated surfaces for up to 12 weeks*. *Excluding mosquitoes, wasps, hornets and yellowjackets.

	CB110766	Black Flag® Flying Insect Killer 3 (Aerosol)	12 x 18 oz. / 510 g Aerosol

Black Flag® Wasp, Hornet & Yellow Jacket Killer

It is very difficult to prevent wasp, hornets and yellow jacksts from building nests. At the first signs of activity, spray small nests. Carefully spray and check the nest after 24 to 48 hours and if no activity is observed, the nest may be safely removed. Black Flag® Wasp, Hornet & Yellow Jacket Killer has a jet spray that reaches up to 29ft, making it easy to treat nests from a distance. Kills on contact while also killing the nest. This product also kills mud daubers, scorpions, spiders (including Black widow & brown recluse) and tent caterpillars. Leaves no oily mess.
