

200 Color

24B1

Booster – industrial soils, for coloured linen

Description

Clax 200 Color is a concentrated liquid surfactant booster based on a blend of surfactants, suitable for coloured linen

Key properties

Clax 200 Color is an effective booster based on a blend of nonionic surfactants. This product shows excellent performance on fatty/oily soil. Fat and oil, once removed from fabric, are effectively dispersed by Clax 200 Color, thus preventing redeposition. Clax 200 Color is mainly used in conjunction with alkalinity boosters and/or mainwash detergents. In combination with the latter its main function is to improve dispersion of fatty and oily soil, thus enhancing wash performance on heavily soiled goods such as cotton and polyester/cotton workwear and table linen. Clax 200 Color can also be used as a pre-treatment product to remove fatty oily stains later on in the washing process. The absence of optical brightener renders this product suitable for use on pastel coloured fabrics.

Benefits

- Excellent performance on fatty and oily soil
- Good foam control properties - optimal use of washer mechanical action
- Suitable for use on pastel coloured fabrics

Directions for use

Use Clax 200 Color at concentrations between 0.5-3ml/kg dry goods depending on the type and degree of soiling and wash classification.

Technical data

Appearance	Clear colourless liquid
pH [1% solution]:	7.0
Relative Density [20°C]	1.0

The above data is typical of normal production and should not be taken as a specification.

Safe handling and storage information

Full guidance on the handling and disposal of this product is provided in a separate Safety Data Sheet; sds.diversey.com.

Store in original closed containers away from extremes of temperature.

Only for professional users / specialists.
